

LINTANG WAHYU AJI SAPUTRO

Jebres, Surakarta, Central Java, Indonesia | lintangwahyu.a.s@gmail.com
github: <https://github.com/Hyousetsuu> | <https://portofolio-lintang-xi.vercel.app/>

A 6th-semester Informatics Engineering student focusing on Machine Learning, Artificial Intelligence, and Software Engineering. Experienced in developing predictive machine learning models using Python and building AI-driven and web applications through various academic projects. Passionate about continuously enhancing technical skills and contributing to data-driven technological solutions

EDUCATION

Universitas Duta Bangsa - GPA 3.8

2023-Present

Faculty of Computer Science – Informatics Engineering

ACADEMIC PROJECTS

Aiko AI - Smart Assistant Chatbot

June 2026

Tech Stack: React, Vite, Node.js, Express, Google Gemini API, Bootstrap, REST API, Framer Motion

- Developed a full-stack AI-powered assistant application using React and Express with a modular MVC architecture integrated with Google Gemini.
- Implemented a multi-agent system capable of handling conversational AI, real-time weather information, RSS news aggregation, document analysis (PDF/TXT), and media utility services.
- Built secure client-side file processing features including image compression, PDF compression, and bidirectional image-to-PDF conversion while prioritizing user privacy and performance.

Kirei - Full-Stack E-Commerce Web Application

May 2026

Tech Stack: React, Vite, Node.js, Express.js, MongoDB Atlas, Mongoose, JWT, Zustand, React Router, Axios, Git, GitHub

- Developed a full-stack e-commerce application using React and Express with a modular RESTful architecture connected to MongoDB Atlas via Mongoose.
- Implemented secure JWT-based authentication with encrypted password storage, persistent shopping cart and wishlist synchronization, order management, and dynamic product review functionality.
- Designed scalable frontend and backend architectures by applying service-layer abstraction, reusable React components, REST API integration, middleware-based request validation, and Git-based version control to improve maintainability and security.

AEGIS DOOR: Hybrid Smart Door Security System

September 2025

Tech Stack: C++, ESP32, Arduino Uno, Telegram Bot API, Keypad 4x4, Servo Motor, Solenoid Lock

- Developed a hybrid smart door lock system integrating offline PIN authentication via keypad and remote access control through Telegram Bot.
- Implemented fail-safe control logic and optimized the operation sequence between the solenoid lock and servo motor to ensure reliable door operation and prevent mechanical conflicts.
- Integrated real-time remote commands, PIN management, and security notifications using ESP32 and Telegram Bot API.

Video Game Popularity Predictive Model

May 2025

Tech Stack: Python, Scikit-learn, Pandas, NumPy, Google Colab

- Developed a machine learning model to predict video game popularity based on genre, platform, and review scores.
- Performed data preprocessing, exploratory data analysis (EDA), and feature engineering to improve model performance.
- Evaluated and compared predictive models using statistical metrics to identify key factors influencing game popularity.

Tech Stack: Flutter, Dart, Firebase Authentication, Cloud Firestore, Git, GitHub

- Developed a mobile digital game marketplace application using Flutter with a modular architecture and Firebase integration for authentication and data management.
- Implemented core marketplace features including user authentication, game catalog management, digital library, payment workflow, friend system, profile management, and administrative dashboards.
- Designed reusable UI components and structured application layers to improve maintainability, scalability, and overall user experience across multiple application modules.

CORE SKILLS

- **Programming Languages:** Python, JavaScript, PHP, Java, Dart, C++
- **Machine Learning & Artificial Intelligence:** Scikit-learn, Data Mining, Data Preprocessing, Exploratory Data Analysis (EDA), Model Evaluation, Google Gemini API
- **Frameworks & Tools:** React, Vite, Flutter, Node.js, Express.js, Mongoose, Git/GitHub, Google Colab
- **Web & Mobile Development:** HTML5, CSS3, Bootstrap, React Router, Zustand, Responsive Web Design, REST API Integration, MVC Architecture, JWT Authentication
- **Database & Cloud Services:** MySQL, MongoDB Atlas, Cloud Firestore, Firebase Authentication
- **IoT & Embedded Systems:** ESP32, Arduino Uno, Hardware Integration
- **Soft Skills:** Problem Solving, Communication, Teamwork, Adaptability, Time Management
