

LINTANG WAHYU AJI SAPUTRO

Jebres, Surakarta, Central Java, Indonesia | lintangwahyu.a.s@gmail.com
github: <https://github.com/Hyousetsuu> | <https://portofolio-lintang-xi.vercel.app/>

A 6th-semester Informatics Engineering student focusing on Machine Learning, Artificial Intelligence, and Software Engineering. Experienced in developing predictive machine learning models using Python and building AI-driven and web applications through various academic projects. Passionate about continuously enhancing technical skills and contributing to data-driven technological solutions

EDUCATION

Universitas Duta Bangsa - GPA 3.8

2023-Present

Faculty of Computer Science – Informatics Engineering

ACADEMIC PROJECTS

Aiko AI - Smart Assistant Chatbot

June 2026

Tech Stack: React, Vite, Node.js, Express, Google Gemini API, Bootstrap, REST API, Framer Motion

- Developed a full-stack AI-powered assistant application using React and Express with a modular MVC architecture integrated with Google Gemini.
- Implemented a multi-agent system capable of handling conversational AI, real-time weather information, RSS news aggregation, document analysis (PDF/TXT), and media utility services.
- Built secure client-side file processing features including image compression, PDF compression, and bidirectional image-to-PDF conversion while prioritizing user privacy and performance.

E-Commerce Web Application

May 2026

Tech Stack: React JS, Vite, Zustand, React Router, Git, GitHub

- Developed a responsive e-commerce web application using React JS with a modular component-based architecture.
- Implemented key e-commerce features including product search, wishlist management, shopping cart, authentication flow, and order processing.
- Utilized Zustand for state management and React Router for client-side routing while maintaining a scalable and maintainable codebase through Git and GitHub.

AEGIS DOOR: Hybrid Smart Door Security System

September 2025

Tech Stack: C++, ESP32, Arduino Uno, Telegram Bot API, Keypad 4x4, Servo Motor, Solenoid Lock

- Developed a hybrid smart door lock system integrating offline PIN authentication via keypad and remote access control through Telegram Bot.
- Implemented fail-safe control logic and optimized the operation sequence between the solenoid lock and servo motor to ensure reliable door operation and prevent mechanical conflicts.
- Integrated real-time remote commands, PIN management, and security notifications using ESP32 and Telegram Bot API.

Video Game Popularity Predictive Model

May 2025

Tech Stack: Python, Scikit-learn, Pandas, NumPy, Google Colab

- Developed a machine learning model to predict video game popularity based on genre, platform, and review scores.
- Performed data preprocessing, exploratory data analysis (EDA), and feature engineering to improve model performance.
- Evaluated and compared predictive models using statistical metrics to identify key factors influencing game popularity.

Tech Stack: Flutter, Dart, Firebase Authentication, Cloud Firestore, Git, GitHub

- Developed an AI-powered virtual assistant bot on Telegram with a modular and scalable software architecture.
- Integrated AI functionalities to automate user interactions and provide intelligent responses.
- Managed version control and collaborative development using Git and GitHub to maintain a structured codebase.

CORE SKILLS

- **Programming Languages:** Python, JavaScript, PHP, Java, Dart, C++
- **Machine Learning & AI:** Scikit-learn, Data Mining, Data Preprocessing, Exploratory Data Analysis (EDA), Model Evaluation, Google Gemini API
- **Frameworks & Tools:** React JS, Vite, Flutter, Node.js, Express.js, Zustand, Git/GitHub, Google Colab
- **Web & Mobile Development:** HTML5, CSS3, Bootstrap, React Router, Responsive Web Design, REST API Integration, MVC Architecture
- **Database:** MySQL, Cloud Firestore, Firebase Authentication
- **IoT & Embedded Systems:** ESP32, Arduino Uno, Fingerprint Sensor, Hardware Integration
- **Soft Skills:** Problem Solving, Communication, Teamwork, Adaptability, Time Management
